

BUCKET ELEVATORS A PROVEN DESIGN

All rights reserved. Reproduction in any form or by any means is not allowed, without prior permission in writing from IHC Robbins.

The proven design of IHC Robbins (IHCR) Bucket Elevators has been installed in a variety of industrial mineral and beach mineral sand applications. Most sizes within the range are currently operating successfully in plants throughout Australia and the world.

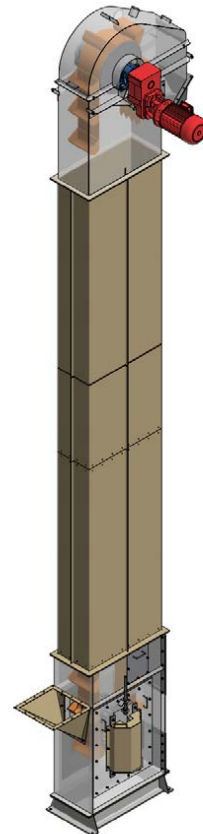

The unit provides a compact design and unsurpassed performance by incorporating high quality proprietary components such as 'Rossi' geared electric motors, and 'Tapco' buckets.

The IHCR Bucket Elevator minimises spillage and dust emissions whilst delivering material at the full name plate capacity. On site maintenance is made simple by the incorporation of strategically placed access doors and inspection hatches. Instrumentation and surface protection coating can be customised to suit any particular client requirement.

We firmly believe the IHCR Bucket Elevator will offer our clients the best alternative for their material handling requirements.

FAST FACTS:

- 7 sizes in design range
- leak-proof boot assemblies
- internationally proven design
