

IHC Metalix

IHC Metalix...

...makes shipbuilding easy!

The majority of the world's transport takes place by water. The demand for transport by sea will continue to increase in years to come, as will the demand for new vessels. Building ships takes time and is expensive. Our delivery method in logistical order on flatracks can help you increase your capacity and reduce your costs.

Since 1986, IHC Metalix has grown to be market leader of high quality construction kits, delivered just-in-time and sorted to your desired building sequence by using the in-house developed Delivery Unit System. Each delivered part is fully traceable, has the necessary coding for assembly and can be followed by track & trace on our website.

IHC Metalix delivers and processes different types of metal such as steel, aluminium or stainless steel to meet your material requirements. It is obvious that the quality of these carefully selected materials, the state-of-the-art technology, as well as the personal service we offer, is at the highest level. Besides our inventive construction kits we offer unique services, varying from perfectly detailed section plans to digital construction kits with accurate product information. All you have to do is select the service you require.

- tailor made construction kits
- full traceability
- track & trace, incl. web access (on all part levels)
- full service (from workshop drawings up to start of building)
- transparency (in processes and performance)
- automated and advanced profile and plate part production
- service desk (production control and speed parts)

Our working method is accredited to DNV ISO 9001 standard.
