

IHC Metalix

The technology innovator.

IHC Metalix...

...your reliable partner for offshore constructions!

The global demand for oil and gas as well as the rapidly expanding sustainable energy production continues to grow. This poses another challenge to the offshore industry by setting ambitious goals for a structural increase in the application of renewable energy. However, start-up costs and project costs in this market are high. This is where IHC Metalix can make a difference due to its inventive logistic delivery system.

IHC Metalix guarantees the production of high quality pre-processed metal with tolerances that enable high quality welding. We use advanced working methods, state-of-the-art machines and we follow strict procedures. A large variety of prefab metals are processed and supplied to meet your requirements.

Our high quality construction kits are delivered just-in-time to suit your desired building sequence. All the parts for one specific job are packed and shipped together. Of course, each component is fully traceable and has the necessary coding for easy assembly, which will speed up construction time and reduce costs.

- high tech plate part production from 3 to 300 mm
- profile robot lines from flat 60 x 6 mm up to pipe \varnothing 1200 mm
- full traceability
- track & trace, incl. web access (on all part levels)
- full service (from workshop drawings up to start of building)
- transparency (in processes and performance)
- service desk (production control and speed parts)

Our working method is accredited to DNV ISO 9001 standard.
