

Pumping slurry is a complex and important process. During the training course, emphasis is put on the hydraulic transport of solid-water mixtures with centrifugal pumps and through pipeline systems.

Who is this course suitable for?

This course is created for project engineers, R&D engineers, design engineers and other individuals with a high level of technical education. Experience in the dredging industry is required. Participants need to be able to perform calculations in Microsoft Excel and use a scientific calculator.

Training method

This course is practical and case-driven. Practical problems are used to teach the theoretical background of the pump and slurry transport processes. Cases are also used to improve the problem-solving skills of attendees.

Training topics

The course will focus on different aspects of the pump and slurry process, such as:

- dredge pump and drive characteristics
- dynamic effects (pump and drives)
- pipeline systems
- the interaction between pump, drive and pipelines
- the influence of solid particles
- dynamic effects in the pump-pipeline systems
- the fundamentals of hydraulic transportation and dredge pumps.

Learning goals

- proper analysis in the process of hydraulic slurry transport
- performing pump calculations
- assessing the interaction between pump, drive and pipelines.

Course material

Participants will receive the training content digitally.

Certificate

Participants will receive a digital certificate of attendance following completion of the training.

Language

English.

Duration

The training is split up over eight half-day sessions. Times will be determined based on the location of the participants.

Training fee

The fee for this training is \leq 2,650,- per person. Full payment of the training fee must be received at least four weeks before the start of the course.

Language

- up to 4 weeks prior to the training: full reimbursement
- between 2 to 4 weeks prior to the training: 50% of the training fee will be reimbursed
- less than 2 weeks prior to the training: training fee is non refundable.
