

Press release - 20 October 2016

IHC Robbins strengthens position in Australia

IHC Robbins is long established in Brisbane and provides clients in the heavy minerals mining and processing sector with metallurgical testwork, practical engineering and specialized equipment. The company is now further strengthening its position on the West Coast through its appointment of Mr Greg Jones.

Mr Jones is the company's Resource & Business Development Manager. He is based in IHC's office in Perth and is a highly regarded professional in the mineral sands industry, with expertise in resource development, auditing and geo-metallurgy. His appointment improves IHC Robbins' ability to service customers from the start of mining projects with integrated solutions in geology, metallurgy, engineering, plant and equipment.

"We are pleased to welcome Greg to the team, as it further cements our capabilities as a total supplier of mining and process solutions," says IHC Robbins COO Matt Robbins. "We look forward to growing the business further in Western Australia and to continue delivering quality services to our customers."

Rebranding

Following the merger of Robbins Technology Group (RTG) and Royal IHC in November 2015, RTG has been rebranded to IHC Robbins. Connecting these two well established names in the mining industry enables IHC Robbins to provide fully integrated mining and processing solutions to our customers.
