IHC Mining and CFlo sign strategic partnership for exclusive distribution of mining equipment in Oceania Region

CFlo World Limited and IHC Mining have signed a strategic partnership to jointly offer solutions to the mining market in the Oceania region. This collaboration will enable both parties to drive innovation in the strategic minerals sector, focusing on silica sands, rare earth minerals, mineral recovery from urban waste, and preconcentration of gold.

CFlo specialises in high-quality, custom-designed mineral processing equipment, specifically for ore beneficiation and critical mineral recovery. IHC Mining, with their Brisbane-based Metallurgy Laboratory and years of industry knowledge and expertise, delivers end-to-end metallurgical services and turnkey solutions tailored to the mineral sands and mining industry.

Following this partnership, IHC Mining will act as the exclusive distributor for CFlo's modular wet processing product range within the mining sector across Australia, New Zealand, Papua New Guinea (PNG), and Fiji.

"We are expanding into global markets with our patented plug-and-play systems. These systems are factory-assembled, shipped worldwide in containers, and deployed with minimal on-site work," said Manish Bhartia, Promoter & Managing Director of CFlo World Limited. "We are excited to welcome IHC Mining to our team and look forward to collaborating with them to offer our modular products to our mining customers in Oceania."

Hans Greve, Managing Director of IHC Mining, commented, "CFlo's environmentally responsible approach to modular wet processing aligns perfectly with our commitment to driving efficiency and sustainability in the mining sector. Integrating their modular processing technology into our project portfolio allows us to offer high-impact solutions that will transform the mining industry."

By combining the strengths of both companies, the CFlo-IHC Mining partnership offers a fresh approach to providing sustainable mining and mineral processing solutions, ensuring efficient and responsible extraction methods throughout the supply chain.

About IHC Mining

For every phase in the mining life cycle for raw materials, IHC Mining provides reliable, integrated solutions, fully tailored to specific demand for mineral resources. By means of the state-of-the-art equipment that we design and build – and the services we deliver – our customers can improve operational efficiency, lower the cost per tonne and make their activities more sustainable. We have a proven track record in solutions for mineral sands, tailings rehabilitation, battery minerals, gold, diamonds, tin and other commodities. In addition, with our experts working on a global basis, we guarantee a local presence and industry leading support on every continent.

IHC Mining is part of Royal IHC, a leading designer, builder and supplier of integrated vessels, equipment and services to customers in the dredging, offshore, mining and defence industries. We deliver reliable solutions that improve operational efficiency and allow for a more sustainable performance. As we navigate new waters, our aim remains unchanged: to discover the smartest and safest way forward for both our customers and our people.

Together, we create the mining future.
